

Microsoft Server Solutions - Turning computers into networks

Microsoft Server Solutions provide a secure, integrated platform which interacts seamlessly with other data and applications across your entire IT environment. Crosshill Computing Services can design, specify, implement and support all components of a Microsoft server solution.

Windows Server 2003 and Server 2008 are multipurpose operating systems capable of handling a diverse set of server roles, depending on your needs, in either a centralized or distributed fashion.

Some of these server roles include:

- File and print server (Windows Server)
- Web server and web application services (IIS Server)
- Mail server (Exchange Server)
- Terminal server (Windows Terminal Server)
- Content management (Windows Sharepoint Server)
- Remote access and virtual private network VPN server (Windows Server)

Previous Experience and Clients

We have provided Microsoft Server Solutions for a range of clients. These include:

- Antrim Estates Company - Windows Server and Exchange Mail Server installation
- BPM Services - Cat5e cabling installation, labeling and testing
- Clare Veterinary Group - Terminal Server installation including backup solution
- DCI Energy - Maintenance and Support of existing Windows Server and Exchange Mail Server
- Whiteford Geoservices - Windows Server and Exchange Mail Server installation.
